

**In the Abstract:**

Please amend the Abstract to read as follows:

A clamp (110) for releasably clamping a catheter ~~is disclosed~~. ~~The clamp includes~~ a body having a first portion (112), a second portion (122), and a hinge (132) connecting the first portion and the second portion, such that the first portion is ~~disposable~~ disposed to face the second portion. The first portion (112) includes a tab (134) extending distal from the hinge (132) and wherein the second portion (122) includes a locking means (146) for releasably locking the tab (134) to the second portion (122). A method of releasably clamping a plurality of catheter lumens (100,102) during catheter insertion and a method of locating a catheter insertion distance based on the location of the clamp are also disclosed.
